

Listen  
up!

Your ears could be  
telling you something

40

MILLION  
AMERICANS  
HAVE HEARING LOSS<sup>1</sup>

Hearing loss affects people of all ages. In fact, about 12% of the U.S. working population has hearing difficulty<sup>2</sup>. Stay sharp, happy, safe, and productive - don't wait to treat your hearing loss.

## What causes hearing loss?

Hearing loss is caused by temporary obstructions in the outer or middle ear or permanent damage to the tiny hairs in the inner ear. Common causes of damage include exposure to noise, aging, other health conditions, and certain medications.

## When should I get my hearing checked?

Hearing loss can come on so gradually that you may not even notice it's happening. In general, you should have your hearing screened every three to five years, and tested annually if you are over the age of 50 or experiencing any of the following:

- **Consistent exposure** to loud noises.
- **Difficulty understanding** in noisy environments or in groups.
- **Hearing mumbling** or feeling as though people are not speaking clearly.
- **Ringings** in your ears.
