You wouldn't
EAT
16
packets of
SUGAR

why would you
DRINK them?

Sip Tips

- Choose water or milk**
(1% or nonfat for those older than 2)
- Stock the fridge with a jug of cold water and bottled water for those on-the-go**
- For a treat once in a while:**
 - Add zest to your water by adding a fresh fruit slice or cucumber slices and fresh mint.
 - Freeze 100 percent fruit juice in an ice cube tray, and then add one frozen cube to a glass of water.
 - Add a small splash of 100 percent fruit juice to plain water.
- Reduce the number and portion size of sugary drinks—drink only once in a while, 8 ounces or less**

RETHINK YOUR DRINK

Choose Water!

Let's Not Sugar-coat It!

Check the Serving Size*

How Much Added Sugar is Too Much?

Sugary drinks are beverages with added sugar

- These drinks include pop, juice/fruit drinks, sweetened teas/coffees, flavored waters, chocolate milk, sports and energy drinks.
- A typical 20-ounce soda or juice/fruit drink contains 15–18 tsp. of sugar—as much as in three chocolate candy bars!

Sugary drinks are bad for your teeth

- Drinking pop nearly doubles the risk of cavities in children. Further, the sugar in sugary drinks feeds the bacteria that produces acid, which attacks and dissolves tooth enamel.

Sugary drinks increase the chance of becoming overweight or obese

- Drinking an 8-ounce sugary drinks each day for a year is equal to 55,000 calories, or 15 pounds a year.
- Drinking one 12-ounce can of pop each day increases a child's chances of becoming obese by 60 percent.

Sugary drinks increase the risk of developing type 2 diabetes

- People who drink one or two cans of pop a day have a 26 percent greater risk of developing type 2 diabetes.

Limit juice—EAT your fruit!

Despite having more nutrients and containing only natural (not added) sugar, 100 percent fruit juice typically contains as much sugar and calories as pop.

20-ounce Citrus Soda
19 tsp.
(77g)
290 calories

20-ounce Sports Drink
8 tsp.
